

## Breaking Down CBT

**Triggers** are emotional, social and environmental factors that provoke a memory or impulse.

**Thoughts** -the act of thinking about something to form ideas and opinions, or an idea or opinion produced by thinking.

**Emotions** – an emotional state or reaction

**Behaviours** - anything that we do that can be observed involving action or response to stimulation

## Looking at our Thoughts

It is important to look at the relationship between our thoughts, feelings and behaviours.

Let's look at an example of how thoughts influence feelings and behaviours:

<b>Situations</b>	<b>Thoughts</b>	<b>Feelings</b>	<b>Behaviours</b>
A friend is late for the movie.	"I hope he is okay, and nothing happened to him"	Anxious or worried	Pacing Biting nails Can't sit still
